### ***Rimac Campus and the VOLUM3 platform***

*Architecture is a slow profession, with an average of 7 years from concept to realization. At the same time, the amount of information is so intense that timely exchange strongly influences creative decisions during design and construction. Architects need to embrace digital transformation: seamless coordination and information exchange, use of BIM, collaboration platforms such as VOLUM3, are tools that can help our everyday practice.*

*More than 25 years of experience in designing and monitoring construction sites have encouraged us to develop an online project management platform - VOLUM3.*

*VOLUM3 is an online platform that replaces a large number of different software, brings together different users - architects, contractors, developers and enables simpler, safer and faster collaboration on projects through all phases - from conceptual design to construction and supervision. All data on the multilingual platform is easily accessible to all project participants from any device at any time. Volum3 enables digital transformation of architectural projects. Benefits of digitalization are evident when it comes to complex projects such as Rimac Campus.*

*The Rimac Campus project was officially presented in April last year. Integrally conceived as a park with a production facility and an office building maximally integrated into the landscape, the campus has been one of the most frequently mentioned architectural projects in Croatian and world media since its presentation. The main element of the concept is the central axis of the campus around which public spaces are located - a lake with a square and a restaurant as a central meeting place for employees with visitors and guests of the campus. In addition to the production facility and office space on campus,*

*a museum and showroom, a restaurant, a kindergarten and accommodation units for guests and employees from all over the world are planned.*
